

Clarity and Mosyle API Integration

Mosyle provides a dedicated interface for controlling access to their API, allowing you to create a custom API Access Token for this integration. They also require additional authentication using your Mosyle Username and Password.

Entering Your User Credentials

We do NOT recommend entering your personal Mosyle Username and Password for this API integration. We suggest creating a new user specifically for this purpose, allowing you to control its access to your MDM.

Creating an Access Token

1. In Mosyle, click on **Organization**.
2. Click **Integrations**, and then click **Mosyle API Integration** in the sidebar.
3. Click the **Add New Token** button.
4. Enter a Profile name for the API Token.
6. Select **Public** under Access Method.
7. Click **Save**.
8. Before you leave the screen, be sure to copy the **Access Token** and paste it into the corresponding field in Clarity.

New API Integration ×

Profile name *

Access Method *

Public
With this option selected, the API will attend requests by any IP.

Restricted by Server IP (Recommended)
With this option selected, the API will only attend requests made by specific IP(s). Supports multiple IPs, comma separated.
